instant  
savings

Just because it “spins on” or “drops in” doesn’t mean it’s the same.

AGCO engineers work diligently to specify filter requirements for every single machine component. This includes filter media, seals and other features that must meet our **EXACT** specifications.

Little things can cause big damage.

Protect your investment with proven performance.

Water, dirt, or rust can easily make their way into your fuel. Using genuine AGCO fuel filters will capture these particles before they damage engine components. Regularly changing the fuel filter helps prevent clogged filters and decreased engine power.

**Genuine Parts. Genuine Service. Genuine Reliability.**

## VSNTM VISUAL GUIDANCE

- Reduces operator fatigue and crop damage
- Enhanced steering control and simple operation results in minimal crop damage and more acres covered in a day
- Operates in challenging terrains, with demonstrated success in areas exceeding eight degrees of slope
- Operates at high speeds, exceeding 20 mph
- Maintains row guidance in crops from less than four inches to nearly full canopy
- Quick, one-time calibration with up to five saved profiles for easy crop transitions
- Proven in corn, soybeans, cotton and sorghum

Kits currently available for RoGator B and C series equipped with Viper 4 and RS1 or SC1.

“ It’s so much easier on the operator. At the end of the day, you’re not as fatigued, and you can pay more attention to your tips and obstacles in the field. It helps you keep your boom out of the dirt and your equipment off the crop.

- Jason Bolsen  
Nutrien Ag Solutions ”
